• **CONCLUSIONS:** The results of this study suggest that the use of a single, standardized, and validated questionnaire can provide a reliable and valid measure of the prevalence of mental health problems in a community sample. The results also suggest that the use of a single, standardized, and validated questionnaire can provide a reliable and valid measure of the prevalence of mental health problems in a community sample.

Ad-10

1. *Chlorophyll a* (Chl a) and *Chlorophyll b* (Chl b) are the primary photosynthetic pigments in green plants. They are responsible for capturing light energy and converting it into chemical energy through the process of photosynthesis. Chl a is the most abundant pigment, while Chl b is present in smaller amounts. Both pigments absorb light most efficiently in the blue and red regions of the visible spectrum.
